- Feed hay & grain in the same feeder, at the same time
- Improved ability to maximize parasite control by keeping hay & feed off the ground
- Easy loading and cleaning
- Heavy-duty, no assembly required unit with stainless steel hardware and optional storage base

The Solution to Common Feeding Issues

“Josh has only three molars and a history of choking. Since we have been using your feeder, we have not had one choking problem. We are using whole pellets, and Josh no longer has to eat the “soup” he was eating for several months before we found you. Your Control Feeder has made his quality of life so much better.”

*Larry Satchwell, Loganville, Georgia
Horse Owner*

“The feeders are “AWESOME!” No more trampled and wasted hay on the ground and no more worry about sand colic. Plus, the horses enjoy “foraging” for their feed while spinning the disk around. They take up to two hours to finish what they used to gulp down in 25 minutes. It’s definitely a win/win!”

*Annie Mauss, Snellville, GA
Horse Owner*

“My Friesian cross, Dutch, had a choking problem that required a vet visit about every six weeks and put me into a panic. The mush that I made for him was very messy and time consuming. Since I found the Control Feeder, Dutch enjoys regular feed and has not choked to date. It possibly saved the life of a wonderful horse.”

**A HEALTHIER WAY
TO FEED YOUR HORSE**

Designed by a horse enthusiast who lost a beloved horse to colic, the Control Feeder provides the ability to minimize this risk, as well as several other common digestive problems associated with eating hay and grain.

Not only does it provide a healthier way to eat, but the Warm Springs Control Feeder supplies your horse with interactive entertainment and a built-in food reward system to reduce boredom related behavioral problems.

Cross Sectional view of feeder and optional stand

Does your horse need to eat slower for health reasons?

Are you tired of hauling expensive, soiled hay to the manure pile?

Does your horse bolt his feed and hay, and then paw or pace?

YOU NEED THE CONTROL FEEDER!

The Control Feeder lets you control how much feed your horse can access at once. Simply change the number and position of the rods in the uniquely designed feeding disk.

Load hay and grain into the feeder, place the disk on top and close the lid!

Your horse will easily spin the disk around with his nose to reach his food. The bottom of the feeder is sloped so feed under the center of the disk slides down to the front. This gives your horse the ability to find every last bite!

The Result?

Your horse is entertained for hours and you save money by eliminating wasted hay and grain.

Your Horse Will Be Happy You Did!**

INTRODUCING THE CONTROL FEEDER

Controlled Feeding

Veterinarians agree that eating slowly promotes better digestion and healthier horses. The Control Feeder lets your horse munch on his feed for hours rather than inhale it in minutes. It also allows you to feed hay and grain in the same feeder at the same time.

Less Waste

Waste is nearly eliminated when feeding is controlled to one bite at a time. The Control Feeder helps manage your hay and grain budget. Plus, by helping to keep hay & grain off the ground, the Control Feeder can be a great addition to your Parasite Control program.

Fun

Make stall time, fun time! Your horse will enjoy spinning the Control Feeder's specially designed disk, while rooting around for every last piece of food.

Easy

The Control Feeder's patent pending design allows you to easily adjust the feeder's opening by changing the number and position of the rods in the disk. It is not only easy to load, but its molded-in drain and its heavy duty construction make it durable and easy to clean.

Guaranteed!

Warm Springs Products guarantees you and your horse will be 100% satisfied with the Control Feeder. If for some reason you are not satisfied, you will receive a full refund.
